Cloud & DevOps Engineer with hands-on experience in **AWS infrastructure, automation, and CI/CD pipelines**. Designed and deployed scalable cloud systems achieving **~41% cost reduction** through optimized architectures and Infrastructure as Code (**Terraform, Ansible**).
AWS Certified Solutions Architect Associate, Oracle Cloud Infrastructure (OCI) DevOps Professional, and OCI Multicloud Architect Professional. Passionate about building **reliable, efficient, and production-ready systems** that bridge innovation with scalability.

EXPERIENCE

Senior Steps - DevOps Trainee

Jun 2024 – Mar 2025

- Container Orchestration: Managed Kubernetes workloads with Deployments, StatefulSets, and Secrets for production environments.
- Infrastructure Automation: Prepared Terraform and Ansible for AWS provisioning, reducing setup time by 65%
- CI/CD Optimization: Built Jenkins pipelines for automated testing and deployment, achieving zero-downtime releases
- Monitoring Implementation: Deployed Prometheus and Grafana stack, improving incident response time by 60%
- Security & Compliance: Applied IAM least-privilege policies and VPC security configurations

PROJECTS

Graduation Project, Cloud Infrastructure Architect

Apr 2025 – Jul 2025

Designed cloud infrastructure for “Theta” an educational collaboration platform serving students with real-time voice chat, document sharing, and whiteboarding.

Reduced projected annual cloud costs from **\$12,000 to \$3,487 (~71% reduction)** by:

- Introducing **S3 lifecycle policies** (Standard → IA → Glacier → Deep Archive), cutting storage costs by **67.3%**.
- Offloading **250GB/month** to CloudFront **CDN**, reducing traffic costs by **55%**.
- Applying **1-year Savings Plans** to EC2 in primary AZ while using on-demand failover in the secondary AZ, This hybrid strategy **reduced** total compute cost by approximately **38%**, while maintaining high availability and fault tolerance.
- Architected event-driven backend using **Lambda + SQS** to decouple file uploads and metadata processing.

Multi-Tier Java Web Application Deployment – VMs & Containers

Jun 2024 – Mar 2025

- Built a multi-tier Java web application using Tomcat, deploying it on virtual machines via Vagrant and automated provisioning with Ansible.
- Re-architected the same app using Docker and deployed it on Kubernetes to evaluate performance and deployment efficiency.
- Compared scalability and resource efficiency between VM-based and container-based infrastructure approaches.
- Connected VMs and containers through internal DNS to validate cross-service traffic and ensure app availability.

Automated AWS Infrastructure Provisioning & Configuration

Jun 2024 – Mar 2025

- Architected and provisioned AWS infrastructure using Terraform as Infrastructure as Code (IaC), deploying core components like EC2, RDS, ElastiCache, ALB, and SQS.
- Automated system configuration and application deployment with Ansible, delivering a Java-based web application on Tomcat.

- Tested end-to-end application flow through ALB using dynamic health checks and target group configurations.

Automated Deployment & Monitoring for The Containerized Java Application

Jun 2024 – Mar 2025

- Containerized the Java application using Docker and implemented automated CI/CD pipelines with Jenkins.
- Integrated Prometheus for application and infrastructure monitoring.
- Built real-time dashboards with Grafana to visualize system metrics and improve incident response.
- Versioned infrastructure and deployment stages using Git, enabling better rollback and team collaboration.

EDUCATION

Mansoura University

Bachelor of Electronics & Communication Engineering – Mansoura University Aug 2020 – Jul 2025

TECH-SKILLS

Cloud & DevOps

- Containerization & Orchestration: Docker, Kubernetes, Helm, Docker Compose
- CI/CD : Jenkins, GitHub Actions.
- Infrastructure as Code: Terraform, Ansible
- Cloud Platforms: AWS (EC2, S3, RDS, IAM, ALB, ASG, VPC, SQS, CloudWatch)
- Monitoring & Logging: Prometheus, Grafana, CloudWatch

System Administration & Networking

- Linux Administration: RHEL, Ubuntu (Admin Level 1 & 2).
- Networking: Cisco CCNA, CCNP-SW TCP/IP, DNS, Load Balancing, VPN Configuration.
- Version Control: Git, GitHub.

Programming & Scripting

- Languages: Java, C++, Dart, Bash.
- Scripting & Automation: Bash Shell, Python, PowerShell .
- Development Practices: Object-Oriented Programming, Clean Code Architecture .

CERTIFICATES

- Oracle Cloud Infrastructure DevOps Professional [↗](#)
- AWS Certified Solutions Architect – Associate – Credly [↗](#)
- Oracle Cloud Infrastructure Multicloud Architect Professional [↗](#)
- Amazon Cloud Summer Training Program - 120 Hours
- Cisco CCNA Summer Training Program – 120 Hours

ACTIVITES

IEEE Mansoura Computer Society Chapter, Technical Director

Apr 2022 - Dec 2023

- Planned and structured the **IEEEcs Mobile App**, defining business needs and functional features.
- Prepared **user stories, user flow diagrams, wireframes, and information architecture** to guide developers and UI/UX designers.
- Supervised the design documentation and contributed to the app's technical planning phase.

LANGUAGES

- **Arabic** : Native
- **English** : Intermediate
