

QASEM MAGDI AL-AQRABI

CLOUD AND DEVOPS ENGINEER

Phone: +201050949833 **Email:** kasimmagdi@gmail.com

Current Address: Giza city, Egypt

Primary Address: Riyadh, KSA

EDUCATION

Bachelor of Science in Computer Science | 2021 – 2025

October University for Modern Sciences & Arts (MSA University) — GPA: 3.83 (Excellent)

Graduation Project: CDizer — AI- and RPA-Enhanced CI/CD Platform

- Developed CDizer, an AI- and RPA-enhanced CI/CD platform with MERN Stack, Docker, Terraform, and Nginx.
- Integrated LogBERT anomaly detection with LLM explainability and RPA-based DevOps automation.
- Delivered interactive pipeline analytics and anomaly visualization dashboard.
- Awarded Best Graduation Project by MSA University (2025), showcased at Microsoft CognitionX Dubai.

Key Technologies: MERN Stack • Docker & Docker Compose • Terraform • Nginx • Qdrant • GitHub OAuth/Webhooks • WebSockets • t-SNE/LIME visualization • MongoDB Atlas

Grade: Excellent

Two-Time Faculty Scientific Day (Deep Minds) Participant, And Winner

PUBLICATIONS

Towards a Hybrid Interaction Model: Comparing Tangible and Gesture-Based Interfaces in Learning Systems – IEEE Conference Proceedings.

- Designed and evaluated hybrid gesture/TUI interaction with eye tracking & emotion recognition for improved user engagement.

Comparing Transformer-Based Log Anomaly Detection With LLM Explainability in CI/CD Pipelines – IMSA Conference 2025 (Top 5 Paper).

- Enhanced LogBERT with LLM explainability, achieving 92% accuracy on real CI/CD logs.

WORK EXPERIENCE

Saudi Training Est. for Contracts – IT Help Desk Intern (Jul – Aug 2023)

- Maintained and optimized internal networks, improving server uptime and reducing routing issues by 15%.
- Developed Bash automation scripts that eliminated repetitive tasks, reducing manual processing time by 30%.

TECHNICAL SKILLS

DevOps & Cloud: AWS Solutions Architect, Kubernetes, Docker, Docker Compose, CI/CD pipeline design & automation, Nginx, Git/GitHub, GitHub Actions, Jenkins, DigitalOcean, VirtualBox

Programming & Scripting: Python, Bash, JavaScript, C++, HTML, CSS, SQL

Networking & System Administration: Linux Admin I & II, Load Balancers, Subnets

Databases: MongoDB, Qdrant, PostgreSQL, MySQL

Testing & QA: SonarQube, Pytest, Selenium, Jmeter, Postman

CERTIFICATIONS

- Azure DP fundamental **DP-900** | 2022
- Azure AI fundamental **AI-900** | 2022
- AWS SAA Solutions Architect | Expected 2025
- Terraform Associate (003) | Expected 2025

PROJECTS

Serverless Lead-Capture Microsite – AWS Serverless Contact & Analytics 2025

- Built a static landing page (CloudFront + S3) with a serverless API (API Gateway + Lambda/Python) to capture inquiries, validate input, persist leads in DynamoDB, and send confirmations via SES.
- Implemented runtime config (no custom domain needed), strict CORS allowlist, and least-privilege IAM; added CloudWatch logs/alarms and basic rate limiting to keep the service safe and low-cost.
- Added a streaming analytics pipeline: DynamoDB Streams → Lambda → S3, Glue crawler + Athena views.

Tools: HTML/CSS/JS, Python (AWS Lambda), Amazon S3, CloudFront, API Gateway (HTTP API), DynamoDB, DynamoDB Streams, Amazon SES, AWS Glue, Amazon Athena, Amazon CloudWatch, IAM.

Cloud Management System – Web-based VM & Docker Management Tool 2025

- Developed a web application to manage virtual machines (QEMU) and Docker resources via an intuitive interface.
- Implemented features for creating, resizing, converting, and deleting virtual disks and deploying VMs with configurable CPU, memory, and OS settings.
- Added unit testing with Pytest for coverage and HTML reports.

Tools: Python (FastAPI), QEMU, Docker, HTML/CSS/JS, Live Server, Pytest

AWS Cloud Infrastructure Project – Secure Scalable Web App 2025

- Deployed a multi-tier AWS architecture with VPC, NAT Gateway, Security Groups, and Auto Scaling EC2 behind an ALB.
- Integrated GitHub Actions CI/CD pipelines to automate builds, vulnerability scans, and deployments to AWS.
- Implemented Lambda + SQS consumer pattern with DynamoDB for event-driven processing.
- Configured Amazon ECR with lifecycle policies and Trivy vulnerability scans for Docker images.
- Secured application with AWS WAF, IAM least-privilege policies, private subnets, and Security Groups.
- Managed sensitive data using AWS Secrets Manager and SSM Parameter Store.
- Enabled monitoring with CloudWatch alarms and log aggregation.

Tools: AWS (EC2, ALB/ASG, DynamoDB, Lambda, SQS, WAF, ECR, Secrets Manager, SSM, CloudWatch), GitHub Actions, Docker + Trivy, Bash, Terraform

FoodPal – Cross-Platform University Food Ordering App 2024

- Developed a Flutter + FastAPI application for university students to pre-order meals, make online payments via Paymob, and receive AI-powered food recommendations using RAG with CrewAI, Ollama, and Groq.
- Features include light/dark mode, menu browsing, cart checkout, and secure JWT authentication.

Tools: Flutter, Dart, FastAPI, MongoDB, Paymob API, CrewAI, Ollama, Groq, JWT, ChromaDB

Hybrid Interaction Virtual Garden – HCI Research & Publication 2024

- Designed and implemented an interactive virtual garden system integrating hand gesture recognition, TUIO-based tangible interfaces, and augmented reality.
- Conducted a comparative study with eye gaze tracking, facial emotion analysis, and heatmap visualizations to assess user engagement, efficiency, and cognitive load.

Tools: C#, TUIO, OpenCV, Eye-tracking, Facial Recognition, AR Visualization
