Objective

I'm a fresh Computer Science graduate from Tanta University with hands-on experience in software development and cloud-related projects. Skilled in .NET Core, C#, SQL Server, Linux, and virtualization. I also have solid knowledge of operating systems, networking basics, troubleshooting, and system configuration. I'm a fast learner with strong problem-solving and teamwork skills, and I'm eager to gain practical experience in IT support, backup operations, and system reliability.

Education

Bachelor of Computer Science

Graduated: July 2025

Tanta University, Tanta, Egypt

Relevant coursework: Data Structures, Algorithms, Object-Oriented Programming, Database Systems, Network, Data Modeling

Experience

Full Stack Intern — Algoriza

July 2025 – Present

- Built data-driven features that required writing optimized SQL queries and performing structured data extraction.
- Created analytical endpoints for usage statistics and reporting dashboards.
- Worked in Agile teams and followed clean, organized technical documentation.
- Improved backend performance through query optimization and indexing.

Back-End Developer Trainee — Route Academy

April 2024 – Dec 2024

- Developed applications with a strong focus on data modeling and relational databases.
- Worked with MS SQL, stored procedures, and entity-level data manipulation.
- Built real-world projects relying heavily on correct data design and reporting logic.
- Gained experience generating structured API outputs used later for reporting/visualization.

Teaching & Mentoring Experience

- Explained programming fundamentals (OOP, algorithms, problem-solving) to classmates and junior students.
- Created beginner-friendly code examples and simplified explanations for complex topics.

Skills

- **Programming Languages:** C#, Python, Java
- **Cloud & Virtualization:** Linux, Virtualization (VMware/Hyper-V), basic cloud concepts
- **Networking basics** (TCP/IP, DNS, DHCP, Ping)
- **Frameworks:** ASP.NET Core (MVC, API), Entity Framework Core
- **Database Management:** MS SQL Server, LINQ
- **Frontend Technologies:** HTML, CSS, JavaScript
- **Tools & Patterns:** Clean Architecture, Fluent Validation, Dependency Injection, Repository Pattern
- **Computer Science:** Data Structures, Algorithms, OOP
- **Version Control:** Git, GitHub, Azure DevOps
- **Soft Skills:** Communication, Problem-Solving, Adaptability, Patience, Teamwork, Analytical Thinking, Attention to Detail

Projects

Ma7ali (Graduation Project with grade A+ - 2025)

A smart multi-tenant platform that enables local brand owners to manage their stores, products, and orders. Developed using ASP.NET Core Web API (backend) and React (frontend). Designed with clean architecture, authentication/authorization, and a scalable system structure.

Private Cloud Simulation (Academic Project)

- Deployed a virtual private cloud using VMware.
- Configured VMs, storage, and networking components.

ECommerce API

A feature-rich eCommerce backend built with ASP.NET Core Web API and EF Core. Implements clean architecture, JWT authentication, Redis caching, and the repository pattern for scalable, secure performance.

Employee System Management

An employee management system using ASP.NET Core MVC. Supports CRUD operations, role-based access, and reporting. Built with EF Core and a responsive UI following MVC principles.
