PROFESSIONAL EXPERIENCE

EDOTCO GROUP – Telecommunications infrastructure company

Data Scientist Intern | Sg, Malaysia | June 2025 – December 2025

- Built and maintained a data ingestion pipeline with validation and deduplication, reducing bad/duplicate files and increasing data reliability by 30% for energy costs.
- Developed an OCR-based processing using a fine-tuned Vlm that converts PDFs into structured Excel, cutting manual document handling by 70% and freeing analysts from repetitive data entry.
- Developed a k-means clustering model to identify sites with strong solar generation and sunlight exposure, enabling reallocation of diesel gensets to higher-need sites and helping lower overall energy and fuel costs.

PROJECTS

AI-Enabled Social Anxiety Chatbot

- Fine-tuned an LLM with LoRA on CBT-style and social-anxiety dialogues to produce more empathetic, on-topic responses; manual review of test conversations showed clearer, more supportive answers vs. the base model.
- Deployed a web-based 3D chatbot using Laravel, FastAPI, and Babylon.js, with logging for each conversation, enabling continuous monitoring and future model improvement.

Insurance COI OCR & Extraction Service

- Built an OCR pipeline to extract key COI fields with 95% accuracy on an augmented test set.
- Packaged the system as a FastAPI microservice to send JSON files to the PHP backend to be stored in a real estate company database.

EDUCATION

MMU, Melaka, MY | GPA: 3.9

Bachelor of Science in Artificial Intelligence

SKILLS & TECHNOLOGIES

- Machine Learning & AI: Transformers, TensorFlow, PyTorch, LoRA, OCR, NLP, basic CV, regression/classification/clustering, N8N, Replit
- Data & Analytics: SQL, pandas, NumPy, Power BI
- MLOps: FastAPI, REST API, Docker, AWS (EC2, S3, Lambda, IAM), Git, Bash, CI/CD
- Python, C++, Java Script
