WORK HISTORY

Networks and Information Security Department & Odoo ERP system support

Jan. 2025- present

Etimad Human Resources (Etimad)

Job Description :

- Supervising the installation, updating, and maintenance of the e-mail system in the entity, and authorizing the operation of the file server, in addition to providing a list of information network services. Supervising the implementation of the necessary installations and applications on operating systems to suit business requirements, and updating the security systems of central servers.
- Manage all activities of the Networks Department and follow up on its achievements.

- Implementation of new projects related to the development of the infrastructure of information technology systems. Follow up on daily work procedures and systems related to the Network Operations Department's operations.
- Preparing designs and solutions for internal and external communication networks, working on analyzing them, and developing the necessary plans for their implementation to ensure that communication between the General Administration, branches, and any external parties is not interrupted, in coordination with the Director of the Infrastructure Department.
- Preparing the necessary infrastructure to operate the alternative site in terms of hardware, communication networks, software, and applications.
- Conducting the necessary checks for all programs and devices of the Networks Department in coordination with the departments of the Information Technology Department
- Monitoring the performance of local and external computer networks and taking precautionary measures in case of problems.
- Preparing and operating network devices and accessories, developing and upgrading them in line with the needs of the Bank and users
- Installing and designing various computer network systems, security and protection systems, and ensuring that they are free of any malfunction or slow transfer of information.
- Applying security controls on networks and computers in accordance with the standards used in wide networks and in accordance with the policies of quality standards and information security in the bank to prevent any internal or external security breaches.

Odoo support

- Work to manage the accounts of network users remotely and grant them the necessary powers.
- **1. Technical Support**
- Troubleshooting system issues (Errors – Bugs – Server Issues).
- Handling database problems (Database Issues).
- Following up on hosting issues, Odoo.sh, or servers.
- Debugging code in case of technical errors.
- **2. Functional Support**
- Assisting users in understanding how to use modules (e.g., Sales, Purchases, Inventory, Accounting, HR).
- Explaining system configurations.
- Providing workflow solutions tailored to the company's business nature.
- Training users on proper Odoo usage.
- **3. Customization Support**
- Submitting requests for modifications or developing additional features as per client needs.
- Providing consultancy on best practices for system customization.

- **4. Incident Management & Continuous Support**
- Receiving and following up on support tickets until resolved.
- Escalating complex issues to the development team when necessary.
- Applying updates and fixes (Patches & Updates).
- **5. Performance Improvement & Quality Assurance**
- Monitoring system performance and suggesting enhancements.
- Ensuring that new modifications don't cause issues in the system.
- Testing modifications before delivery.
